| | |
|---|---|
| **Customer** | Gog GmbH |
| **Method of analysis** | Real-time RT-qPCR |
| **Pathogen** | *Hop latent viroid* (HLVd) |
| **Sample material** | Roots |
| **Date of Analysis** | 02.10.2026 |

| Sample Name | CT-value internal control | CT-value HLVd | Result |
|---|---|---|---|
| **Black Cherry Gushers** | **9,73** | **–** | **negativ** |

| CT-value | relative amount of HLVd in the sample |
|---|---|
| < 15 - 20 | HIGH |
| 21 – 28 | MEDIUM |
| 29 - 35 | LOW |
| - | NONE |

The results reported in the test report refer exclusively to the examined sample material, as received. The laboratory declines all responsibility for the methods of carrying out sampling, transport and storage of the samples until delivery. Do not reproduce parts of this report without the permission of the laboratory. We recommend a screening interval of 6-8 weeks for mother-plants to detect new infections early.
